

**Providing Expertise
When You Need It
Since 1979.**

With over four decades in the industry, there is a reason customers return to CATSI.

Our proven track record of performance, achievement, and outstanding service speaks for itself. At CATSI, we understand that asset availability is critical to operations and our customers bottom line. Our inspectors know where to look for potential problems and can recommend solutions before they result in an asset failure.

CATSI'S foundation is deeply rooted in the emergence of current API inspection standards. We have performed hundreds of thousands of inspections around the world for the refining, pipeline, chemical, power and manufacturing industries. Our inspection services range from mechanical and structural inspections to full-scale program management for these global energy and manufacturing markets.

Our management team is dedicated to creating an organization that people want to become a part of, which is why we attract and retain the most reputable and knowledgeable professionals in our industry. When you call for help, we can quickly fill the needs with experienced, knowledgeable and productive inspectors.

3M™ Certified Turnkey Fall Protection Safety Systems

Maintaining fall arrest equipment and systems is about more than meeting minimum regulatory requirements—it is a commitment to the wellbeing of the men and women who keep our facilities running day-to-day.

At CATSI, our 3M certified fall protection installers and experienced crews assist your company to ensure that your fall protection system is set up properly and **in compliance with all OSHA standards**.

In addition to being a 3M Certified fall protection supplier and installer, CATSI provides inspection, testing and five-year recertification on all manufactured lifelines, as well as worker training and system maintenance.

Horizontal/Vertical Lifelines:

- Cable Condition
- End Anchorage and Slip Indicator
- Tensioning Devices
- Intermediate Support Systems
- Swing-Fall Analysis

Tie-off and Tie-in Points:

- Above and Below Roof Condition
- Adequacy of Anchorage
- Welded and Bolted Connections
- Davits and Swing Arm Frames

Single Source for all Needs:

- Installation
- Inspection
- Certification
- Training
- Maintenance
